

Algorithms-II
Autumn 2022
Tutorial- 3

1. Suppose you are given a matching M in a bipartite graph $G = (V, E)$. Design a linear time algorithm to check if M is a maximum matching or not.

2. In the **Stable Roommate** problem, there is a set of $2n$ people, each of whom ranks everyone else in order of preference. The goal is to find a perfect matching (a disjoint set of n pairs) such that there is no unstable pair. Show that unlike the stable matching problem, there may not exist any stable matching in this case.

3. (a) Let C be a convex polygon, and P a point. Propose an algorithm to determine whether P is inside or outside C .

(b) Let P_1, P_2, \dots, P_n be a set of n points in the general position. We want to compute $\text{CH}(P_1, P_2, \dots, P_n)$. Use Part (a) to convert $\text{CH}(P_1, P_2, \dots, P_i)$ to $\text{CH}(P_1, P_2, \dots, P_{i+1})$. What is the running time?

4. Let S and T be two disjoint sets of points in the Euclidean plane. S and T need not be horizontally separated. You have computed the two convex hulls $CH(S)$ and $CH(T)$. Propose an $O(n)$ -time algorithm to merge these two hulls to $CH(S \cup T)$, where $n = |S \cup T|$.

5. Let S be a set of n points in the plane. Let L_1 denote the set of vertices of $\text{CH}(S)$. Remove the points of L_1 from S , and compute the convex hull of S again. Let L_2 denote the set of vertices of this convex hull. Repeat.

What is the worst-case running time for computing all onion layers if you use (a) Jarvis march (b) Graham scan. Give tight bounds.

6. You are given n points in the plane in general position. Arrange the points to a list P_1, P_2, \dots, P_n such that each $P_i P_{i+1} P_{i+2}$ is a right turn.

7. Triangulation of a convex polygon is a partition of the polygon into a set of triangles (so no two triangles have intersecting pairs, and the union of all the triangles is the polygon). How can you use the incremental convex-hull construction to triangulate the convex hull $CH(S)$ of a set of points S such that all the points of the triangle are from S ? Running time?
